NORTHPORT SYSTEMS ANNOUNCES RELEASE OF PLUG-IN FOR FUGAWI MARINE ENC™ PROVIDING GOOGLE™ EARTH SUPPORT

Google Earth Images Provide Boaters with Realistic View of Surroundings

Toronto, Canada – Northport Systems, Inc., a leader in GPS mapping software and innovative GPS applications, announced today the official release of the innovative Fugawi Google™ Earth Plug-in for its popular Fugawi Marine ENC™ product. The new Plug-in allows boaters to view their current GPS location on geo-referenced Google Earth images next to actual charts in split-screen mode. This combination of detailed cartography and high-resolution aerial photography provides boaters better visual awareness, enhanced charting information and added peace of mind while boating.

When connected to the internet, the Fugawi Google Earth Plug-in will automatically download Google Earth maps of a boater's current location for split screen viewing in Fugawi Marine ENC, enabling users to display their GPS position on the Google Earth map. Users can also overlay Fugawi supported third-party maps and charts on top of Google Earth imagery and adjust layer transparency, as well as transfer non-copyright protected maps for permanent use in Google Earth. Google Earth images of regularly traveled or planned routes can also be saved for later display when internet connectivity is not available.

"We are thrilled to announce the release of our Fugawi Google Earth Plug-in and bring accurate position-specific satellite imagery to Fugawi Marine ENC," said Robin Martel, president, Northport Systems. "Popular cruising destinations, such as the Caribbean and non-US waters are not always ideally charted. Google Earth maps help make navigational hazards such as sandbars, channel openings and coral reefs more discernible, providing boaters access to new destinations."
